

## Bio - Actor

The Syscon Bio - Actor is a fast garden composter made up of seven stackable frames manufactured from 100% of post-consumer recycled plastics.

The total capacity is about 500 liters.

Dimensions: 92 x 92 x 13,5 cm exterior

78 x 78 cm interior

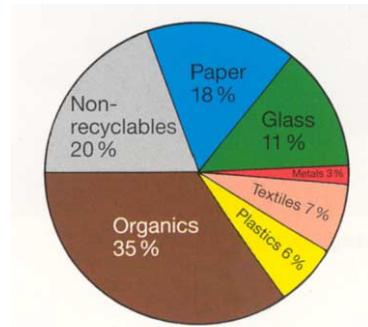

Each frame has three integrated layers:

- a perforated inner ventilation wall
- an insulating middle wall
- a perforated outer ventilation wall

The 9.4l Pre-Sorting-Bin is ideally suited for sorting and collecting various compostable, organic and other recyclable materials, whether in kitchen or household.

Whether these kitchen scraps are composted at home or in a central composting plant, the quality of the compost will depend on successful and responsible sorting at the original source.

It is beneficial for all of us to sort all elements at the point of generation to ensure high levels of recycling.

The Bio - Actor with protective snap-on lid and with adjustable aeration dome.

The Syscon Bio - Actor speeds up the composting process by insulating the decomposing material from hot and cold fluctuations in exterior temperatures, thereby guaranteeing constant and ideal temperatures for the compost process. Insulation is provided by each frame's three integrated layers.

Both the inner and outer ventilation walls promote aeration, while the inner wall also serves to prevent the accumulation of excessive moisture.

Experience and research confirm the benefits of using the Bio-Actor cover. The protective snap-on lid with adjustable aeration dome significantly enhances the performance of the Bio-Actor, particularly in extreme temperatures.

- Composting time can be reduced by up to 25%
- Avoidance of unpleasant odours
- No leachate run-off from organic material
- Practical and priceworthy
